RapidEntry Facility Temperature Screening System

Thermal screening technology integrated with turnkey access, monitoring & signage solution

WHY

EMPLOYEE TRUST AND SAFETY

The CDC recommends temperature checks for workspace entry. To provide a safe environment, building operators are being asked to conduct temperature checks on occupants and visitors prior to their access. RapidEntry provides a seamless way to screen people as they enter the building naturally, without long queues or intrusion. A specialized thermal camera with calibrator technology is integrated into a sturdy and aesthetically designed structure, which can quickly and easily fit into most building lobbies or check-in space. A secondary screening station provides a private space for anyone needing a further checkup.

WHO

Building Owners
Facility Managers
Property Managers
Business Leadership

BENEFITS

Turnkey Solution

- Rapid, non-intrusive temperature check
- Supports physical distancing without queueing
- Flexible design, quick and easy to implement with no construction
