

TECHNOLOGY ASSET RECYCLING

Sustainable Solutions that Work

Technology is rapidly changing every day and businesses continually embrace new media in order to stay competitive in our global economy. Technology asset recycling ensures the safe, secure, and environmentally responsible recycling of obsolete or unneeded technology and e-waste. For over 20 years, Red Thread has been a pioneer in the field of technology recycling, and remains at the forefront with innovative procedures and techniques for keeping your assets, and the planet, safe.

Why Recycle Your Technology Assets with Red Thread?

- Properly process legacy technology equipment
- Securely remove sensitive data
- Safely dispose of assets
- Remove assets from corporate tax base
- Reclaim valuable storage space
- Offset disposal cost through resale and donation

Real Time Reporting

From beginning to end, your assets will be electronically scanned and entered into our real time reporting system, allowing you to access your inventory throughout the entire processes via a secure, password-protected website.

The Process

Retrieve: Retrieve assets from desktop to dock. Tag and inventory assets. Transport to our facility by a secure and monitored fleet.

Receive: Re-inventory assets upon arrival.

Remove: All data is removed following government guidelines. Certificate of recycling and data. Destruction is provided. E-waste is properly processed and separated.

Recycle: Distribute for recycling, resale, and donation.
