

Conferencing Design and Budget Guide

Supporting collaboration with audiovisual technology

COVID-19

The COVID-19 pandemic has dramatically impacted all organizations. Now more than ever, collaboration technologies are critical for both working from home and as part of your re-entry strategy.

The content in this guide was developed prior to COVID-19, but we have made some updates to include the estimated safe capacity for each room setting using [CDC's social distancing recommendations](#). The technology solutions remain relevant and reflect the newest solutions from Microsoft, Zoom and Cisco.

People + Space + Technology = WORKPLACE TRANSFORMATION

People, space and technology drive the way we work.

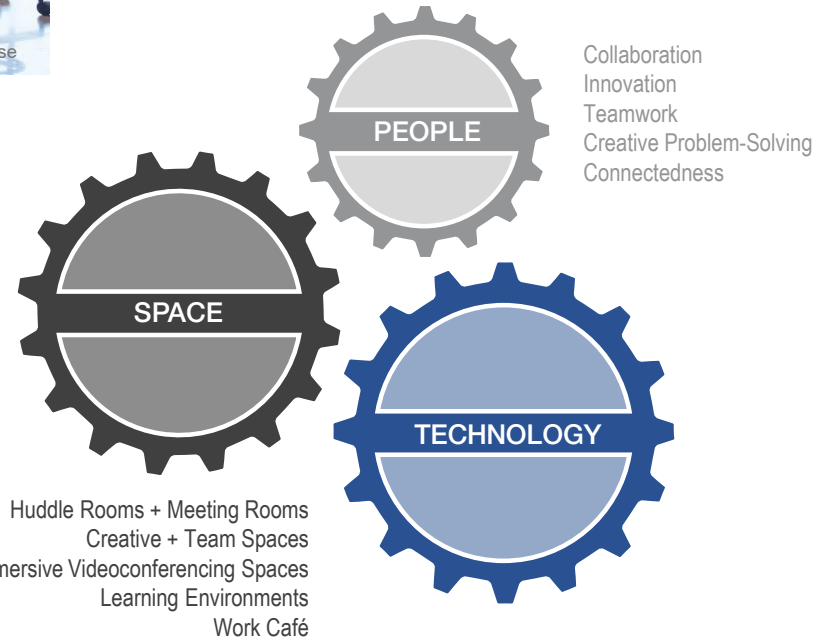

Today's powerful mobile devices, ubiquitous internet access, and cloud-based applications make working anywhere, anytime, possible. Companies must employ strategies to support collaboration for a more tech-savvy workforce.

Every organization today is trying to boost their bottom line and rethink their technology strategy to best support their employee's productivity, efficiency and work experience, all while managing costs.

People + Space + Technology = Workplace Transformation

There is a critical need for workplace transformation today – creating flexible office environments that adapt to support how we work now and in the future.

When you thoughtfully combine people, space, and technology, it can foster new levels of collaboration and innovation.

TECHNOLOGY GOALS ASSESSMENT

What are your technology design goals?

Purchasing technology for your organization is a significant investment in time and resources, and needs to be well-thought out. There are a number of questions you should ask to discover the right solutions for you:

How is technology used in your organization?

- Is it for scheduled meetings?
- Impromptu collaboration?
- Displaying content?
- Interactive collaboration?
- Company-wide news and announcements?

How effective is the technology you currently use?

- What capabilities would make your people more productive?
- What are you currently not able to achieve that you would like to?
- How long does it typically take your people to start a meeting?
- Is the user experience consistent, whether someone is working locally in an office or remote?

Do you use web or video conferencing?

- Do people typically meet face-to-face using displays to share content?
- What percentage of your workforce works remotely?
- How frequently are people looking to collaborate with others that are both local and remote?
- Do remote workers have a satisfying and productive user experience?

Do you have a standard platform across the organization?

- Are you standardized on Microsoft or Cisco?
- Do you instead use a mixed platform of solutions?
- Do you have challenges with the interoperability of a mix of conferencing applications and/or video conferencing systems?

What is your workplace culture?

- Is your organization more “classic,” seeking practical, cost effective solutions that get the job done? These solutions might include basic engineered systems.
- Is your organization more progressive, seeking immersive technologies integrated holistically within the space to drive a creative and collaborative workplace culture? These solutions might include open and enclosed spaces with bundled systems and all-in-one solutions.
- Does your organization require integrated high-performance systems that provide the highest fidelity video and audio for local and remote participants? These solutions might include integrated conferencing systems.

HOW TO USE THIS GUIDE

To identify the technology for your collaboration spaces can be overwhelming. There are many decisions you will make throughout the decision process, and this guide offers a simplified framework for narrowing down the infinite technology options available. We don't provide every option, of course, but this guide will help you to begin the preliminary process of understanding your options and developing a technology plan and budget. It is important to engage with the right technology integration partner early in the process to take you through the decision making process, develop budgets, design and implement systems and provide ongoing support.

1. Choose your technology platform

Conferencing technology has rapidly evolved and is widespread throughout companies large and small. With a strong economy, organizations are expanding regionally, nationally and internationally. Better and lower cost mobile technologies are driving the need for remote offices and a distributed workforce to collaborate easily. Whether you have already invested in a unified communication platform, like Microsoft or Cisco, or have many different types of systems, your future technology investments should build upon your current platforms.

Zoom Solutions
(page 22)

Cisco Solutions
(page 38)

2. Choose your room type

There are many unique types of spaces in which people collaborate. Room size and physical attributes impact the functionality of the space. From our experience, there are several common room types that are ideal for different types of collaboration for specific group sizes. We have identified five of the collaboration room types that are most common in organizations: huddle rooms, meeting rooms, boardrooms, multipurpose rooms, and work cafés.

Huddle Room

Meeting Room

Boardroom

Multipurpose Room

Work Café

The images in this Guide do not reflect current social distancing requirements. Please consult the [CDC's website](#) for their most up-to-date guidelines. In the collaboration solutions by room type, we have documented both the illustrated and suggested safe capacity for each space.

HOW TO USE THIS GUIDE

3. Choose your system type

Technology systems fall into three major categories: all-in-one solutions, bundled systems, and integrated conferencing systems. Here are the differences between them:

All-in-One Solutions

All-in-one-solutions by manufacturers create a seamless user experience by integrating all of the technology you need into a single device. A flat screen display with interactive touch integrates web conferencing, microphones, cameras, speakers and an easy-to-use interface. These solutions are most often used in flexible spaces, like work cafés and multi-purpose rooms, or meeting rooms and boardrooms with non-traditional furniture that provides adequate space for users to interact with the board.

Bundled Systems

A Bundled System can provide a seamless user experience as it is a pre-packaged manufacturer- engineered solution with cameras, microphones, speakers and a control panel. They sometimes have limitations in available options (for example, only come with standard cameras and microphones), so they perform best in moderately-sized meeting rooms.

Integrated Conferencing Systems

An Integrated Conferencing System, designed by an AV/IT integrator, creates an immersive conferencing experience. The system is designed with a unified touch control that operates an integrated video conferencing codec, high resolution camera, makes the source selection and adjusts audio levels. Near and far-end participants are viewed on single or dual displays. These systems are custom engineered to accommodate your specific needs and unique spatial requirements.

BUDGET RANGE: *

All-in-One Solution

No Installation	\$ 9,350
Includes Wall Mounted Installation	\$ 10,350
Includes Mobile Stand and Battery	\$ 11,850
Includes Wall Mount Installation & Mobile Stand and Battery	\$ 12,500
Microsoft Teams Room License – 1 Yr	\$ 180
Microsoft Extended Service – 3 Yr	\$ 1,899

Collaboration System – Bundled

No Monitor, Installed Collaboration System	\$ 4,415
No Monitor No Installation	\$ 2,960
Includes 55" Display Installed	\$ 5,190
Microsoft Teams Room License – 1 Yr	\$ 180
One Year Service	\$ 350

Huddle rooms support planned and impromptu collaboration for small groups.

Footprint: 8' x 10' | 80 SF

Compatible Platform: Microsoft Teams

SYSTEM TYPES

- **All-in-One Solution:** For a seamless user experience, multiple features are integrated within a single device. Participants interact with a 50.5" touch-controlled display to share content and collaborate with local and far-end participants and facilitate using the digital whiteboard. The system has built-in cameras, microphones, speakers and integrated Windows 10 Microsoft Teams web conferencing.

Note: Typically these small spaces do not have tables directly underneath display in order to provide adequate space for users to interact with the display.

- **Bundled System:** For optimal simplicity for web/audio conferencing, pre-packaged manufacturer's solutions incorporate a PC Nuc running Microsoft Teams web conferencing, 55" display, camera, microphones, speakers and control panel, integrated into various styles of tabletop consoles. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system. There are many bundled solutions compatible with Microsoft Teams web conferencing. The Logitech bundle solution was referenced for this pricing estimate, but there are solutions from Poly and Crestron available at a similar price point.

Note: Integrated Conferencing systems are typically designed for larger spaces and not provided for Huddle spaces.

* Pricing is an estimate only and excludes tax, and delivery.

DESIGN CONSIDERATIONS

- Display height should be 48" from the floor.
- Display size should be between 4 and 8 times the distance from the furthest seat at the table.

The Meeting Room is intended for moderate sized gatherings for presentation, audio or web conferencing.

Footprint: 12' x 15' | 180 SF

Compatible Platform: Microsoft Teams

SYSTEM TYPES

- All-in-One Solution:** For a seamless user experience, multiple features are integrated within a single device. Participants interact with a 65" touch-controlled display to share content and collaborate with local and far-end participants and facilitate using the digital whiteboard. The system has built-in cameras, microphones and speakers that will run on an owner-furnished computer with Windows 10 and Microsoft Teams web conferencing.
- Bundled System:** For optimal simplicity for web/audio conferencing, pre-packaged manufacturer's solutions incorporate a mini PC running Microsoft Teams web conferencing, 65" display, a camera, microphone pod, and speakers integrated into various styles of tabletop or wall mount sound bars. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system. All bundled systems are controlled by a touch panel. There are many bundled solutions compatible with Microsoft Teams web conferencing. The Logitech bundle solution was referenced for this pricing estimated, but there are solutions from Poly and Crestron available at a similar price point.

BUDGET RANGE: *

All-in-One Solution

No Installation	\$ 7,000
Includes Wall Mounted Installation	\$ 8,200

Collaboration System – Bundled

No Monitor, Installed Collaboration System	\$ 6,105
No Monitor No Installation	\$ 4,550
Includes 65" Display Installed	\$ 7,850
Microsoft Teams Room License – 1 Yr	\$ 180
One Year Service	\$ 510

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- Consider the acoustics to ensure privacy and sound quality, (i.e.) demountable wall STC ratings, sound absorption materiality of ceilings, floors and walls
- Lighting should be incorporated that properly illuminates room participants
- Consider far-end camera views to minimize distractions and confidentially
- For all in one system solutions, ensure that there is adequate space for users to interact with the display.

The boardroom’s enhanced video & audio is optimal for more formal conferencing presentations.

Footprint: 20’ x 35’ | 700 SF
Compatible Platform: Microsoft Teams

SYSTEM TYPES

- **Bundled System:** For optimal simplicity for web/audio conferencing for medium to large sized boardrooms, a pre-packaged manufacturer’s solution is comprised of a mini PC integrated with Microsoft Teams web conferencing, a 10” wired touch panel, single or dual displays, wall-mounted sound bar with a high definition 4k camera, premium microphone and speakers. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.
- **Integrated Web/Audio:** For engineered web/audio conferencing for medium or large sized boardrooms, an integrated system consists of a mini PC integrated with Microsoft Teams web conferencing, a 10” wired touch panel, digital media interface, audio sound processor, single or dual flat screen displays, ceiling array microphones, in-ceiling speakers, and a tracking camera specified to accommodate the size and sight lines of the room. Components are rack-mounted in an owner-furnished credenza with proper cable access and ventilation. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.

BUDGET RANGE: *

Collaboration System – Bundled

No Monitor No Installation	\$	4,500 – 5,000
75” Display, Wall Mounted	\$	9,300 – 10,600
86” Display, Wall Mounted	\$	10,900 – 12,100
Dual 75” Displays, Mounted	\$	13,700 – 15,000
Dual 86” Displays, Mounted	\$	17,000 – 17,700
Microsoft Teams License – 1 Yr	\$	180
One Year Service	\$	726 – 1,200

Integrated Conferencing Web/Audio

86” Displays, Wall Mounted	\$	20,100
Dual 75” Displays, Mounted	\$	33,200
Microsoft Teams License – 1 Yr	\$	180
One Year Service	\$	1,400 – 2,250

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- Consider the acoustics to ensure privacy and sound quality, (i.e.) demountable wall STC ratings, sound absorption materiality of ceilings, floors and walls
- Lighting should be incorporated that properly illuminates room participants
- Consider far-end camera views to minimize distractions and confidentially
- For all in one system solutions, ensure that there is adequate space for users to interact with the display.

INFRASTRUCTURE BY OTHERS *		The following items would be provided by other contractors:	
Device	Location	Infrastructure	Trade Responsible
Display	At Front Wall	Structural support per display	Construction Contractor
		Shared duplex outlet 20amp circuit per display	Electrical Contractor
		Installation of a plenum rated in-wall box per display	Provided by AV Contractor Installed by Electrical Contractor
		LAN connection	Low Voltage Contractor
Control Panel	At Table	1 grommet cut out	Furniture Contractor
		PoE Cable	Low Voltage Contractor
		2 x Poke thru with 1.5" conduit under table and floor core inside front wall for cable passage	Construction Contractor
Rack	At Credenza	2 x Dedicated duplex 20amp circuit power	Electrical Contractor
		LAN Connection	Low Voltage Contractor
		Plenum rated junction box with 1.5" conduit	Construction Contractor
		Provide adequate credenza ventilation	Furniture & AV Contractor

* Infrastructure requirements vary by project and therefore represent a general guideline.

** Not required for all-in-one solutions as camera, microphones and speakers are integrated into the display.

SOCIAL DISTANCING SPACE PLANNING

Illustrated capacity: 24-30 people
 Estimated safe capacity: **12 people**

© Logitech

BUDGET RANGE: *

Integrated Conferencing Web/Audio

No Monitors, Installed Integrated System	\$ 37,900
Dual 86" Displays, Mounted	\$ 47,200
Microsoft Teams License 1 Yr	\$ 180
One Year Service	\$ 3,200

This flexible space provides multiple layouts for company presentations, seminars, training and team collaboration.

Footprint: 30' x 30' | 900 SF

Compatible Platform: Microsoft Teams

SYSTEM TYPES

- Integrated Web/Audio:** To accommodate larger spaces for web conferencing, a system was designed to provide the functional and space requirements of a multipurpose environment. The integrated system consists of a mini PC integrated with Microsoft Teams web conferencing, a 10" touch panel, digital media interface, dual 86" displays, audio sound processor, two ceiling array and two wireless microphones and in-ceiling speakers. Components are rack-mounted in an owner-furnished credenza with proper cable access and ventilation. Two tracking cameras are specified; one to capture the presenter and the second to capture the audience for far-end viewing. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- If adjacent spaces are divide/combine, consider acoustics, privacy and sound quality.
- Divide/combine spaces would be an upgrade to this multipurpose design.

INTEGRATED CONFERENCING

 **Display:**
Dual 86" Flat Screen Display

 **Input Sources:**
Mini PC with Microsoft Teams Web Conferencing

 **Cameras:**

INTEGRATED CONFERENCING

Web/Audio

INFRASTRUCTURE BY OTHERS * <i>The following items would be provided by other contractors:</i>			
Device	Location	Infrastructure	Trade Responsible
Display	At Front Wall	Structural support	Construction Contractor
		Dedicated duplex 20amp circuit	Electrical Contractor
		Installation of a plenum rated in-wall box	Provided by AV Contractor Installed by Electrical Contractor
		LAN connection	Low Voltage Contractor
Rack	At Wall Next to Lectern	2 x dedicated duplex 20amp circuit power	Electrical Contractor
		Poe Cable and LAN connections	Low Voltage Contractor
		Plenum rated junction box with 1.5" conduit	Electrical Contractor
		Provide adequate OFE lectern ventilation	Furniture & AV Contractor

* Infrastructure requirements vary by project and therefore represent a general guideline.

This flexible, informal space supports individual work and collaboration in addition to presentations, trainings and events.

Footprint: 40' x 40' | 1,600 SF

Seats: 35

Compatible Platform: Microsoft Teams

SYSTEM TYPES

- Integrated Web/Audio:** To accommodate larger spaces for web conferencing, a system was designed to provide the functional and space requirements of a work café. The integrated system consists of a 10" touch panel, digital media interface, audio sound processor, and a PC running Microsoft Teams web conferencing. The system design includes dual 86" flat screen displays, two wireless handheld microphones, two lapel microphones and in-ceiling speakers. Two tracking cameras are specified; one to capture the presenter and the second to track the audience. Given the scale of the space, audience questions are to be facilitated by the presenter to the far end of the web conference call. Components are rack-mounted in an owner-furnished credenza with proper cable access and ventilation. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.

BUDGET RANGE: *

Integrated Conferencing - Web/Audio

No Monitors, Installed Integrated System	\$ 33,700
Dual 86" Displays, Mounted	\$ 43,000
Microsoft Teams License – 1 Yr	\$ 180
One Year Service	\$ 2,850

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- To ensure the legibility of images and text on the display, when determining the display size, the furthest person seated in the space can be positioned no more than 6 times the height of the display
- Consider the amount of ambient light in the space when selecting the display or projector brightness. Shades can provide better visibility on sunny days.
- To maintain visual sight lines, avoid hanging pendant fixtures that are lower than the top of the display image.
- Sound masking can minimize distractions for those seated in adjacent spaces.

* Infrastructure requirements vary by project and therefore represent a general guideline.

The Meeting Room is intended for moderate sized gatherings for presentation, audio or web conferencing.

Footprint: 12' x 15' | 180 SF
Compatible Platform: Zoom

SYSTEM TYPES

- Bundled System:** This Zoom bundled solution offers optimal simplicity for web/audio conferencing. The pre-packaged system incorporates a Dell Optiplex micro pc running Zoom web conferencing, a 65" display, table microphone pods and a sound bar with integrated camera. The users interface with a 9.7" iPad, housed in a table console. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.
- Integrated Web/Audio:** This is a Zoom engineered packaged solution. For optimal viewing, far-end participants and content are shown on dual 65" displays utilizing Zoom cloud-based web conferencing. For high fidelity audio conferencing, two ceiling array microphones with an audio processor and distributed in-ceiling sound system support clear verbal communication. Components are rack-mounted in an owner-furnished credenza with proper cable access and ventilation. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system. The users interface with a 9.7" iPad, housed in a table console and designed with a Zoom standard user interface for system control.

BUDGET RANGE: *

Collaboration System – Bundled

No Monitor	\$ 5,950

Dual confidence monitors not shown in photo.

BUDGET RANGE: *

Integrated Conferencing Web/Audio

No Monitor, Installed Integrated Systems	\$ 28,700
Dual 86" Displays, Mounted	\$ 38,000
Zoom Licenses	\$ 600
One Year Service	\$ 2,400

This flexible space provides multiple layouts for company presentations, seminars, training and team collaboration.

Footprint: 30' x 30' | 900 SF
Compatible Platform: Zoom

SYSTEM TYPES

- **Integrated Web/Audio:** This Zoom engineered package system is designed to meet the requirements of similar sized multipurpose environments. Participants display and share content on dual 86" flat screen displays from a Dell OptiPlex computer with integrated Zoom web conferencing. Two ceiling array microphones, two wireless microphones and a pan/ tilt/zoom camera (wall mounted at the display) will capture local room audio and video for remote participants. Audio is distributed through the ceiling speakers. Components are rack mounted in an owner furnished credenza with proper cable access and ventilation. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system. The users interface with a 9.7" iPad, housed in a table console and designed with a Zoom standard user interface for system control.

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- If adjacent spaces are divide/combine, consider acoustics, privacy and sound quality.
- Divide/combine spaces would be an upgrade to this multipurpose design.

BUDGET RANGE: *

Integrated Conferencing Web/Audio

No Monitors, Installed Integrated Systems	\$ 27,300
Dual 86" Displays, Mounted	\$ 36,600
Zoom Licenses	\$ 600
One Year Service	\$ 2,300

This flexible, informal space supports individual work and collaboration in addition to presentations, trainings and events.

Footprint: 40' x 40' | 1,600 SF

Compatible Platform: Zoom

SYSTEM TYPES

- **Integrated Web/Audio:** To accommodate larger spaces for web conferencing, this Zoom engineered package system is designed to meet the functional and space requirements of a work café. Participants display and share content on dual 86" flat screen displays from a Dell OptiPlex computer with integrated Zoom web conferencing. Four wireless microphones and dual pan/tilt/zoom cameras will capture local room audio and video for remote participants. Given the scale of the space, audience questions are to be facilitated by the presenter to the far end of the web conference call. Audio is distributed through the ceiling speakers. Components are rack-mounted in an owner-furnished credenza with proper cable access and ventilation. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system. An iPad controller is designed with a Zoom standard user interface for system control.

DESIGN CONSIDERATIONS

- To ensure the legibility of images and text on the display, when determining the display size, the furthest person seated in the space can be positioned no more than 6 times the height of the display
- Consider the amount of ambient light in the space when selecting the display or projector brightness. Shades can provide better visibility on sunny days.
- To maintain visual sight lines, avoid hanging pendant fixtures that are lower than the top of the display image.
- Sound masking can minimize distractions for those seated in adjacent spaces.

All-in-One Solution

55" Cisco Webex Board, Installed \$ 6,300

Collaboration System – Bundled

No Monitor, Installed Collaboration System	\$ 6,850
55" Display, Wall Mounted	\$ 8,050
Cisco Licenses	\$ 1,200
One Year Service	\$ 560

Huddle rooms support planned and impromptu collaboration for small groups.

Footprint: 8' x 10' | 80 SF
Compatible Platform: Cisco Webex Teams

SYSTEM TYPES

- **All-in-One Solution:** For a seamless user experience, multiple features are integrated within a single device. Participants interact with a 55" touch-controlled display to share content and collaborate with local and far-end participants using the digital whiteboard. The system has built-in cameras, microphones and web conferencing.

Note: Typically these small spaces do not have tables directly underneath display in order to provide adequate space for users to interact with the display.

- **Bundled System:** For optimal simplicity for web/audio conferencing, a pre-packaged Cisco Room Kit incorporates a sound bar with integrated camera, microphone, speaker and codec running Webex conferencing software. far-end participants and content are shown on a 55" display. The users interface with a Cisco Touch 10" wireless control panel. An additional laptop (wired or wireless) input is available as an optional upgrade to the base system.

Note: Integrated Conferencing systems are typically designed for larger spaces and not provided for Huddle spaces.

* Pricing is an estimate only and it excludes tax and delivery.

DESIGN CONSIDERATIONS

- Display height should be 48" from the floor.
- Display size should be between 4 and 8 times the distance from the furthest seat at the table.

FEATURED PRODUCTS

Nureva Wall

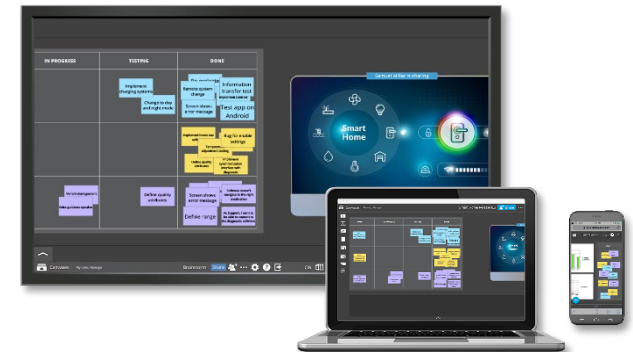

Supersize your team space.

The Nureva Wall system combines a capacitive touch surface with an ultra-short-throw HD projector support highly collaborative teams. You can create a workspace tailored to your team's needs. Nureva Wall configurations can be as small as 7' 6" (2.30 m) wide or as large as 60' (18.29 m) wide. They can span the length of a wall, be placed in a corner or wrap around an entire room for immersive visual collaboration.

Span Workspace

An expansive canvas for visual collaboration.

Span Workspace is a cloud-based solution that lets you create an unlimited number of digital canvases to visualize ideas and map processes. Anyone with a subscription can invite other users or guests to a canvas, and everyone can work together on it in real time, using any device. Familiar tools, including sticky notes, sketches, images and templates, help you shift from paper to digital collaboration without compromising your proven processes.

FEATURED CAMERAS

Meeting Owl

Meeting Owl is a 360° all-in one audio and video conferencing device. Its intelligent software provides a panoramic view of the room and automatically focuses on the active speaker.

Polycom Eagle Eye Director

Polycom Eagle Eye Director uses automatic people-tracking technology for an engaging, natural meeting experience. It automatically zooms in on the active speaker and identifies everyone within the room.

Vaddio RoboSHOT 20 UHD

Vaddio RoboSHOT is a 4K pan/tilt/zoom camera that offers pristine image quality and outstanding low light performance. It provides IP streaming and network control via a web interface, and is perfect for medium and large spaces.

Polycom Studio

Polycom Studio provides exceptional audio and video quality for smaller huddle spaces. It integrates a USB video bar with speaker, microphone and camera for plug-and-play functionality. Requires a computer and web conferencing software. Compatible with Microsoft Teams, Zoom, GoToMeeting, Cisco Webex and more.

Logitech Meetup Camera

MeetUp is Logitech's premier ConferenceCam for small conference rooms and huddle rooms. Stop crowding around laptops. With an extra wide field of view, motorized lens and RightSight™ auto framing plus a pan/tilt lens, MeetUp makes every seat at the table clearly visible. With integrated audio optimized for huddle room acoustics, everyone can be heard as well as seen.

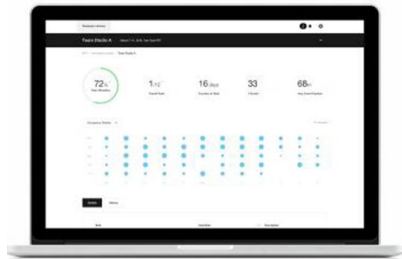

Logitech Rally Camera

With premium industrial design and an Ultra-HD imaging system, Rally Camera tops the lineup of standalone video cameras from Logitech®. Packed with advanced optics and breakthrough technologies, Rally Camera delivers premium performance in professional meeting spaces of all shapes and sizes. With whisper-quiet mechanical Pan/Tilt/Zoom, razor-sharp 15X HD zoom, expansive 90° diagonal field of view, and powerful 4K sensor, Rally Camera captures every person in the room with truly phenomenal video quality.

FEATURED SOFTWARE

Steelcase

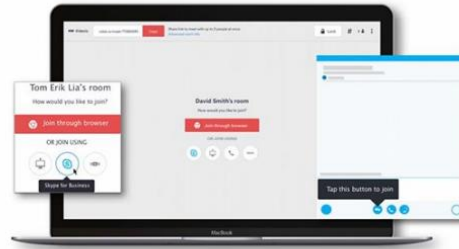

Steelcase Workplace Advisor + Steelcase Find App

Big data. Better places.

Steelcase Workplace Advisor is a cloud-based sensing and analytics system that tracks and analyzes room usage data over time. Steelcase Find is a mobile app that works with sensors to help users find the perfect space to work.
